

20XC57 - WEB ENGINEERING LAB

TITLE: WebScan - Web Vulnerability Scanner

TEAM:

VISHAL RAM V A (21PC38)

YAMUNA SHREE P (21PC40)

Abstract:

Webscan is an all-in-one Tool for Web Penetration Testing. This all-in-one tool offers a myriad of features and functionalities tailored to the precise requirements of penetration testing. Its primary focus is to identify and expose weaknesses, vulnerabilities, and potential security flaws within computer systems, networks, and applications. Webscan provides multiple features and detection features that gather target information and find different flaws.

FEATURES :

- Sub-domain Scanning
- Port Scanning
- WordPress Scanning
- WordPress Username Enumeration
- WordPress Backup Grabbing
- Sensitive File Detection
- Clickjacking Detection
- Redirection Detection
- Cloudflare Block Detection

MODULES USED:

Python 2.7, Colorama, BeautifulSoup
